EDUCATION

- **International Institute of Information Technology, Naya Raipur** Raipur, India
Bachelor of Technology - Electronics & Communication Engineering — GPA: 8.71/10 2021 - 2025
- **Delhi Public School** Bhilai, India
Intermediate — Percentage: 96% 2019 - 2021

EXPERIENCE

- **TailoredAI** Remote
AI Engineer Oct 2025 - Present
 - Automated a client’s end-to-end hiring pipeline with an agent-driven workflow, cutting time-to-hire from 2 weeks to 3 days and saving 15 recruiter hours per opening.
 - Built a real-time AI voice interview agent using OpenAI Whisper (STT) and TTS models, running 20+ automated interviews at sub-2s latency.
 - Built a candidate-sourcing engine that profiles and ranks 200+ applicants per opening by scoring past work, resumes, and project fit, cutting shortlisting from hours to minutes.
- **Hyperverge** Remote
SDE Jan 2025 - Oct 2025
 - Refactored the INDIA-OCR stack with async thread/process pool executors and in-memory OpenCV image handling, cutting ASG instances 20% and lifting throughput from 2 to 5 RPS.
 - Optimized GPU inference on Triton (dynamic batching, multi-instance GPU execution, ensembles, model warmup), cutting the peak g4dn.2xlarge ASG from 40 to 10 instances (75% GPU cost reduction).
- **TestRigor** Remote
Full Stack Development Intern Nov 2023 - April 2024
 - Designed a custom Language Server Protocol (LSP) over JSON-RPC to power intelligent code suggestions in the team’s IDE, cutting test authoring time by 20%.
 - Built an executor service to parallelize test execution across 8 backend instances using Java, Docker, and Kubernetes, cutting test execution time by 40%.

PROJECTS

- **Cortex - GraphRAG AI Assistant** — Github
 - Built an AI assistant with an MCP backbone that ingests code and documents into a Neo4j knowledge graph, answering multi-hop natural-language queries with cited sources via Graph-RAG and Cypher-to-LLM translation.
 - Parses codebases into ASTs to power semantic code search, automated test generation, and documentation.
Tech: TypeScript, Python, Neo4j, OpenAI, MCP, Zod.
- **Events App** — Github — Deployed Link
 - A full-stack event management web app to create events and buy tickets, with Stripe integration, Clerk-based authentication, and tag-based search. *Tech: Next.js, MongoDB, Tailwind, ShadCn, Clerk, Stripe.*
- **Text-Summarizer** — Github
 - Built an abstractive text summarizer using Hugging Face’s Pegasus model, served over a FastAPI backend for sequence-to-sequence summarization of long documents. *Tech: Python, Hugging Face Transformers, FastAPI.*

ACHIEVEMENTS AND AWARDS

- **Flipkart Grid 5.0 Finalist** - Qualified for the finals, where a total of 1 lakh teams participated.
- **Competitive Programming** - Ranked Specialist (1480+) on **CodeForces** and 4 Star (1800+) on **CodeChef**.
- Solved over 2500+ problems across **LeetCode**, **GFG**, CodeForces, and CodeChef.
- **Kaggle Specialist** - Achieved a rank under 400 in the Kaggle RL competition **ghoulreaper**.

SKILLS AND TECHNOLOGIES

C++, Java, Python, JavaScript, TypeScript, Golang, Node.js, Express, React, Next.js, MongoDB, PostgreSQL, Neo4j, Docker, Kubernetes, AWS, PyTorch, TensorFlow, OpenAI, MCP, GraphRAG.
