EDUCATION

- **International Institute of Information Technology, Naya Raipur** Raipur, India
Bachelor of Technology - Electronics & Communication Engineering — GPA: 8.71 Dec 2021 - Present
Courses: Operating Systems, Data Structures, Analysis of Algorithms, DBMS, Machine Learning, Computer Networks
- **Delhi Public School** Bhilai, India
Intermediate — Percentage: 96 2019 - 2021
Courses: Physics, Chemistry, Mathematics, Computer Science

EXPERIENCE

- **Hyperverge** Remote
SDE Intern Jan 2025 - Present
 - Developed an intelligent CodeLLM agent by converting source code to ASTs, building a Neo4j-based knowledge graph, and using Cypher queries for semantic code search and Q&A. Enabled automated test generation and code reviews, integrating a light RAG pipeline using MongoDB and Neo4j, boosting code productivity.
 - End-to-end ownership of the India-Verify product, used to fetch verified data via DigiLocker from national databases (PAN, Aadhaar, Voter ID, etc.). Delivered key features and coordinated rolling-deployments for production releases.
- **Sauvant AI** Remote
SDE Intern April 2024 - Nov 2024
 - Built a scalable loan origination system from scratch using Express.js, MongoDB, and Next.js with a microservices architecture and enforced code quality via linters, formatters and CI/CD
 - Deployed the platform on AWS EC2 with Auto Scaling Groups (ASG), Elastic Load Balancer (ELB), and configured custom domain with Route 53 and ACM-backed HTTPS for secure access.
- **TestRigor** Remote
Full Stack Development Intern Nov 2023 - April 2024
 - Designed and implemented a custom Language Server Protocol (LSP) using JSON-RPC to power intelligent code suggestions in the team's IDE, reducing test case authoring time by 20%.
 - Developed an executor service to parallelize tasks across 8 backend instances using Java, Docker, and Kubernetes, improving load distribution and reducing test executions time by 40%.

PROJECTS

- **Events App — Github — Deployed Link**
An Event management full stack application built using NextJs
 - **About:** A web app for users to create events and buy tickets for events with stripe integration
 - **Tech Stack:** NextJs, MongoDB, Tailwind, ShadCn, Clerk, Stripe
 - **Features:** Includes a user-friendly interface, sign-in options using Clerk, and an advanced tag-based search functionality
- **Memories - MERN APP — Github**
A web application for sharing special memories
 - **About:** Developed a sophisticated social media web application enabling users to share their travel experiences.
 - **Tech Stack :** ReactJS, Redux, MUI, ExpressJs, MongoDB
 - **Features:** Crafted an interactive user interface with features for liking and commenting on fellow users' posts.
- **Text-Summarizer — Github**
It's a high level text summarizer created using pegasus model
 - Developed an intelligent text summarizer using the Pegasus model from Hugging Face, excelling in distilling complex documents and enhancing content comprehension for valuable information extraction.
 - Built on Fast API for a reliable backend, utilizing Hugging Face Transformers and Python for advanced sequence-to-sequence learning with Pegasus.
 - Created with HTML, CSS, and JavaScript to ensure seamless user interaction.

ACHIEVEMENTS AND AWARDS

- **Flipkart Grid 5.0 Finalist** Qualified for finals where a total of 1 lakh teams participated
- **Competitive Programming** Ranked Specialist (1480+) in **CodeForces** and 4 Star(1800+) in **CodeChef**
- Solved over 2500+ problems across **LeetCode**, **GFG**, **CodeForces**, **CodeChef**.
- **Kaggle Specialist** Achieved rank under 400 in Kaggle Competition of RL **ghoulreaper**

SKILLS AND TECHNOLOGIES

C++, Java, JavaScript, Rust, Python, Golang, MongoDB, PostgreSQL, Git/GitHub, Docker, AWS, Kafka, Kubernetes, Node.js, Express, Tailwind CSS, Typescript, Redux, Recoil, React, Next.js REST APIs, GraphQL, RPCs, TensorFlow, Keras, Django, Flask, Open AI, Lang Chain, HTML5, CSS3.
